LAB 1

Q. Write a program to simulate the working of stack using an array with the following

A) Push
B) Pop
C) Display

The Program should print appropriate messages for stack overflow and stack underflow.

PROGRAM

```
#include<stdio.h>
#include<stdlib.h>
#define SIZE 10

void push(int);
void pop();
void display();
int S[SIZE],top=-1;
int main()
{
        int x,a;
        while(1)
        {
                printf("[1]PUSH\n[2]POP\n[3]DISPLAY\n[4]EXIT\n");
                printf("----------------------------");
                printf("\nEnter Your Choice: ");
                scanf("%d",&a);

                switch(a)
```

```
                {
                        case 1: printf("\nEnter the value to be inserted: ");
                                scanf("%d",&x);
                                push(x);
                                break;
                        case 2: pop();
                                break;
                        case 3: display();
                                break;
                        case 4: exit(0);
                        default: printf("\nWrong Selection!!!Select Again!!!\n");
                }
        }
}

void push(int x)
{
        if(top==SIZE-1)
                printf("\nStack is Full!!!\n\n");
        else
        {
                top++;
                S[top]=x;
                printf("\nElement successfuly Inserted!!!\n\n");
        }
}

void pop()
{
```

```
	if(top==-1)
		printf("\nStack is Empty!!!\n\n");
	else
	{
		printf("\nDeleted: %d\n\n",S[top]);
		top--;
	}
}

void display()
{
	if (top==-1)
		printf("\nStack is Empty!!!\n\n");
	else
	{
		int i;
		printf("\nStack Elements are:\n");
		for(i=top;i>=0;i--)
			printf("%d\n",S[i]);
			printf("\n\n");
	}
}
```

LAB 2

Q. WAP to convert a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and the binary operators +(plus), -(minus), *(multiply) and /(divide)

PROGRAM

```
#include<stdio.h>

#include<ctype.h>

#define SIZE 50

char stack[SIZE];

int top=-1;

push(char a)
```

```
{
        stack[++top]=a;
}
char pop()
{
        return(stack[top--]);
}
int operator(char symbol)
{
        if(symbol=='^')
        {
                return(3);
        }
        else if(symbol=='*'||symbol=='/')
        {
                return(2);
        }
        else if(symbol=='+'||symbol=='-')
        {
                return (1);
        }
        else
        {
                return(0);
        }
}

int main()
```

```
{
        char infix[50],postfix[50],x,elem;
        int i=0,k=0;
        printf("Conversion of Infix expression to Postfix:\n\n");
        printf("Enter the infix expression: ");
        scanf("%s",infix);
        push('#');
        while((x=infix[i++])!='\0')

Q. WAP to Implement Singly Linked List with following operations

a) Create a linked list.

b) Insertion of a node at first position, at any position and at end of list.

c) Deletion of first element, specified element and last element in the list.

d) Display the contents of the linked list.

PROGRAM

```
#include<stdio.h>
#include<stdlib.h>

struct node
{
        int data;
        struct node *next;
};
struct node *head;

void insert_front()
{
        struct node *ptr;
        int new_data;
        ptr = (struct node *)malloc(sizeof(struct node));

        if(ptr == NULL)
        {
```

```
                printf("\nOVERFLOW!!!");
        }
        else
        {
                printf("\nEnter the Value to be inserted:");
                scanf("%d",&new_data);
                ptr->data = new_data;
                ptr->next = head;
                head = ptr;
                printf("\nNODE INSERTED AT THE FRONT\n");
        }
}

void insert_end()
{
        struct node *ptr,*temp;
        int new_data;
        ptr = (struct node *)malloc(sizeof(struct node));

        if(ptr == NULL)
        {
                printf("\nOVERFLOW!!!\n");
        }
        else
        {
                printf("\nEnter the Value to be inserted:");
                scanf("%d",&new_data);
                ptr->data = new_data;
                if(head == NULL)
```

```
                {
                        ptr->next = NULL;
                        head = ptr;
                        printf("\nNODE INSERTED\n");
                }

LAB 7 & LAB 8

Q. WAP Implement Singly Linked List with following operations

a) Sort the linked list.

b) Reverse the linked list.

c) Concatenation of two linked lists

d) Implementation of Stacks & Queues using Linked Lists

PROGRAM

```
#include<stdio.h>
#include<stdlib.h>

struct node
{
        int data;
        struct node *next;
};
struct node *head;
struct node *head2;

//stack operations
void push()
{
        struct node *ptr;
        int new_data;
        ptr = (struct node *)malloc(sizeof(struct node));
```

```
        if(ptr == NULL)
        {
                printf("\nOVERFLOW!!!");
        }
        else
        {
                printf("\nEnter the Value to be inserted:");
                scanf("%d",&new_data);
                ptr->data = new_data;
                ptr->next = head;
                head = ptr;
                printf("\nNODE INSERTED AT THE TOP OF THE STACK\n");
        }
}
void pop()
{
        struct node *ptr;
        if(head == NULL)
        {
                printf("EMPTY LIST!!!");
        }
        else
        {
                ptr = head;
                head = ptr->next;
                free(ptr);
                printf("\nNODE DELETED FROM TOP OF THE STACK\n");
        }
}
```

```
//queue operations
void enqueue()
{
	struct node *ptr,*temp;
	int new_data;
	ptr = (struct node *)malloc(sizeof(struct node));

	printf("\nEnter the Value to be inserted:");

LAB 9

Q. WAP Implement doubly link list with primitive operations

a) Create a doubly linked list.

b) Insert a new node to the left of the node.

c) Delete the node based on a specific value

d) Display the contents of the list

PROGRAM

```
#include<stdio.h>
#include<stdlib.h>

struct node
{
        struct node *prev;
        int data;
        struct node *next;
};
struct node *head;
struct node *last;

//Create DLL
void create_list()
{
        struct node *ptr;
        int i,n,new_data;
        printf("\nEnter the number of nodes:");
        scanf("%d",&n);
```

```
        if(n>=1)
        {
                head = (struct node *)malloc(sizeof(struct node));
                if(head != NULL)
                {
                        printf("\nEnter the value to be inserted for Node 1 :\t");
                        scanf("%d",&new_data);

                        head->data = new_data;
                        head->prev = NULL;
                        head->next = NULL;

                        last = head;

                        for(i=2;i<=n;i++)
                        {
                                ptr = (struct node *)malloc(sizeof(struct node));

                                if(ptr != NULL)
                                {

LAB 10

Q. Write a program

a) To construct a binary Search tree.

b) To traverse the tree using all the methods i.e., in-order, preorder and post order

c) To display the elements in the tree.

PROGRAM

```
#include<stdlib.h>
#include<stdio.h>
```

```
struct node
{
	int key;
	struct node *left;
	struct node *right;
};
struct node *root;
